

Enagic® Kangen Water®

The Benefits

Kangen Water® - Benefits

Hydration and Drinkability

Ionized alkaline water is an excellent source of healthful hydration because not only does it taste better with a superior mouth-feel, it is more readily absorbed by the body. This increases the “drinkability” of water by reducing the usual feeling of being “bloating” from drinking the recommended daily allowance of 8 glasses per day. In side-by-side tests, most people can taste the difference!

Micro Clustering

Preliminary studies have evidenced a phenomenon identified as “micro clustering” which refers to the exceptionally small “structured” molecules of alkaline water. Numerous benefits have been associated with this phenomenon.

Free Radical Scavenging

Ionized alkaline water supports the wellness of bodily organs while promoting the health of those same organs. Part of the reason for these benefits is that ionized alkaline water has been demonstrated to be an anti-oxidant free radical scavenger.

Encouraging Longevity

Scientifically recognized benefits of water include the support of wellness and longevity. The natural benefits of water are encouraged and enhanced by alkalinity. Alkalinity is the state in which water is most harmonious with its physiological wellness benefits.

Detoxification

Water is the universal solvent that our bodies rely on for flushing toxins and waste products from the body. With its negative oxidation-reduction potential (ORP) and great taste, you can count on ionized alkaline water such as Kangen Water® to aid in the neutralization of free radicals and address all of your body’s hydration needs.

Acidic Water - Benefits

Toxic-free Cleaning

A number of manufacturers build industrial multi-purpose cleaning machines (floor cleaners, etc.) that use only strong acidic water as the cleaning agent. Similarly, swimming pool systems are migrating from harsh chlorine systems to ionizing acidic water systems to keep pools clean.

Personal Hygiene

Acidic water—referred to in Asia as “Beauty Water”— is an effective external cleaning agent for use in personal hygiene (external cleansing and bathing, etc.)

Environmentally Green

One of the reasons acidic water is being adopted by institutions as diverse as hospitals and custodial services is that acidic water is non-polluting. Introduced into the environment, acidic water rapidly returns to its resting pH state. Acidic water is naturally free of phosphates and other pollutants that risk our environment and the future of our world.
